PAWAN KUSHWAHA

Senior Software Developer

Contact number: 8867539240
Email: pawanbmsce146@gmail.com

PROFILE:

Software engineer with 6+ years building systems that sit between people and the services they rely on: customer refunds, vehicle servicing, payments, and internal knowledge. I have led cross-functional work with Finance, Operations, and Product. I now focus on agentic AI and on how to make it reliable, accountable, and useful to non-technical people.

EDUCATION:

- Bachelor of Engineering in Electronics and Communication Engineering
- BMS College of Engineering(VTU), Bengaluru
- CGPA: 9.48/10, Second rank in 180 students

TECHNICAL SKILLS:

- **Languages:** Java, JavaScript
- **Frameworks:** Spring Boot, Node.js, Express, Sails.js, Next.js, React
- **AI and agents:** LangChain, LangGraph, RAG, Google Gemini, tool calling, agent memory, human-in-the-loop design
- **Data:** PostgreSQL, MySQL, MongoDB, Redis, Apache Kafk**a**
- **Infrastructure**: Docker, Kubernetes, Google Cloud Platform (GCP), Prometheus, Grafana
- **Testing**: JUnit, Mockito, Mocha

PROFESSIONAL EXPERIENCE:

1. Ather Energy Limited— Senior Software Developer, Bengaluru · Aug 2020 – Present
   Ather is an Indian electric-scooter maker

PROJECTS:

- **AGENTIC AI PROJECT:**Built an internal knowledge assistant that auto-syncs new documents, keeps the RAG index up to date, and layers a LangGraph agent on top for grounded search and Q&A with Google Gemini.Ran structured evaluation (accuracy, relevance, faithfulness/groundedness, and latency) and iterated on retrieval and prompts until answers met team quality bars.
- **Charger refund program (policy compliance at national scale)**: Led the engineering side of a government-mandated program that helped bring the company back into the FAME-II EV subsidy scheme. Worked with Finance and other teams to automate refunds to 150,000+ verified customers, totalling about ₹120 crore (~US$14M). Built verification and reconciliation so every payout could be audited.
- **Data Archival Service (end-to-end ownership):** Owned the service from solution design through development, testing, and deployment. It archives legacy data so production systems stay lean and fast, and saves about ₹40–50 lakh (~US$50–60K) in infrastructure costs. Coordinated with cross-functional teams so integration and rollout went smoothly.
- **Notification platform**:Designed and built a notification microservice on Apache Kafka that handles 100,000+ notifications a day. Redesigned database schemas and queries to cut latency.
- **Core platform microservices:** Built payment, user, authentication, and RSA services with REST APIs for apps and partners, and added Prometheus and Grafana alerting so the team could catch issues before users did.

CERTIFICATIONS:

- Certification on Kubernetes.
- Certification on NodeJS and Web development.
- Certification on Langchain and LangGraph.

LEADERSHIP, COMMUNITY & INTERESTS:

- **Leadership**: Led a team of 8 engineers, mentored 6, ran design reviews across services, and interviewed 10+ candidates for the team.
- **Community service & social engagement:** Volunteered with the BMS Service Club to support underserved students through educational outreach and community initiatives, helping create greater access to learning resources.
- **Interests:** Cricket, long-distance running, classical music, travel across India, reading novels
